Snakes of Durban Poster by Nick Evans -

Wed, 09 May 2018 04:41:00 GMT - Spiders are chelicerates and therefore arthropods. As arthropods they have: segmented bodies with jointed limbs, all covered in a cuticle made of chitin and proteins; heads that are composed of several segments that fuse during the development of the embryo. Being chelicerates, their bodies consist of two tagmata, sets of segments that serve similar functions: the foremost one, called the ...

Sat, 21 Apr 2018 14:49:00 GMT - Attacks: 34 Fatalities: 1 The hammerhead sharks are actually a family of sharks (Sphyrnidae) which range in size from less than a metre (3ft) to over 6 metres (20ft). It is believed the strangely shaped head allows the shark better all round vision. To most observers the different species are difficult to tell apart, especially when theyâ€™re biting your foot off.
